PROFILE

MSc Business Analytics graduate (Distinction, University of Surrey) with experience across banking operations, behavioural analytics, predictive modelling, and business intelligence. Currently working within HSBC UK's Wealth & Personal Banking division in a regulated FCA environment, with hands-on expertise in SQL, Python, Power BI, Excel, and statistical analysis. Conducted a behavioural analytics study across 113 participants that improved interpretation accuracy from 61% to 70%; built an end-to-end retail analytics project across 9,800+ transactions and \$2.26M in sales, reducing forecast error from ~250% to ~11% weekly MAPE; and developed a Gradient Boosting model achieving 83.47% accuracy on UK road traffic accident data.

EDUCATION

University of Surrey, Guildford

Guildford, UK

MSc Business Analytics – Distinction

Sept 2025

- Key Modules: Operational Analytics (83%), Financial Modelling (80%), Statistics & Econometrics (77%), Data Mining (77%), Machine Learning, AI & Visualisations (75%)

EXPERIENCE

HSBC UK

London, UK

Universal Banker – Wealth & Personal Banking

Mar 2026 – Present

- Assess and resolve 2–3 fraud cases daily within HSBC's Wealth & Personal Banking division, applying AML verification protocols and risk identification procedures in a regulated FCA environment
- Support delivery of financial products and services across a regulated retail banking environment, operating within FCA Consumer Duty and internal compliance frameworks on a daily basis
- Enrolled in HSBC University's Data & AI Academy alongside the role, developing expertise in data analytics and the application of AI to enhance analytical workflows, insight generation, and data-driven decision-making.

ReviveBattery B.V

London, UK

Research Analyst Intern

Nov 2025 – Feb 2026

- Built a fixed-effects regression model forecasting battery recycling volumes through 2027 across 2 European markets, identifying the stronger investment market through ROI-based analysis across 10 regulatory and commercial variables
- Conducted end-to-end market analysis integrating EU regulatory frameworks, fleet age structure data, and recycling volume datasets across 2 markets to assess commercial viability and investment risk
- Delivered a market-entry strategy report covering 10 regulatory areas within a 4-month internship, directly supporting senior leadership decision-making on European market entry

PROJECTS

Retail Sales Analytics & Forecasting | SQL, Python, Power BI, Prophet, DAX

2026

- Executed end-to-end SQL diagnostics on 9,800+ retail transactions worth \$2.26M across 4 regional markets, applying window functions and CTEs to identify a 32% sales collapse in the South region and low-AOV structural weaknesses in the Central market
- Built a three-page interactive Power BI dashboard with DAX measures, time intelligence modelling, and KPI tracking – enabling regional performance comparison and data-driven business recommendations
- Developed a Python Prophet forecasting model reducing weekly MAPE from ~250% to ~11% through time-series aggregation, improving forecast reliability and automating demand planning

Impact of Statistical Visualisations on Decision-Making | R, MATLAB, SQL, Excel, iMotions

2025

- Designed and executed a controlled behavioural analytics study across 113 participants using eye-tracking, pupil dilation analysis, and physiological sensors to measure how visualisation design affects decision accuracy and cognitive load
- Applied Wilcoxon testing and linear mixed-effects modelling in R across multimodal datasets combining response accuracy, fixation heatmaps, and biometric signals
- Found that redesigned violin plots improved interpretation accuracy from 61% to 70% ($p=0.014$) and reduced response times by 14 seconds compared with traditional histograms

- Road Traffic Accident Severity Prediction | SAS, Machine Learning, NLP2025
- Conducted end-to-end predictive analytics on 2,480 UK road traffic accident records across 35 variables using SAS for data preparation, visualisation, and modelling
 - Developed a Gradient Boosting model achieving 83.47% accuracy, 0.9172 AUC, and 0.6688 KS statistic, identifying key accident severity drivers including location and speed limit
 - Applied SAS text analytics and topic modelling on 598 social media posts to generate insights on accident impact and public sentiment

TECHNICAL SKILLS

Languages & Tools: SQL (MySQL), Python (Pandas, NumPy, Prophet), R, SAS, STATA, MATLAB

BI & Visualisation: Power BI, Power Query, DAX, Excel (Advanced), Data Visualisation, Dashboarding

Analytics: Statistical Modelling, Forecasting, Machine Learning, Regression Analysis, ETL, Behavioural Analytics, Exploratory Data Analysis (EDA)
